

## POSTER LISTING

---

- Eromanga Adermann, Sydney Institute for Astronomy** [201]  
Searching for Intermediate Mass Black Holes in Early Type Galaxies Featuring Prominent Dust Lanes
- Shaila Akhter, UNSW School of Physics** [202]  
Clustering of dense molecular gas in the Milky Way Galaxy
- Mohammad Ali Nawaz, ANU** [203]  
Interaction of Hydra A jets with the Intracluster medium
- Rebecca Allen, Swinburne University** [204]  
Using Scaling Relations to Examine the Effects of Environment on High Redshift Galaxy Evolution
- Richard Beare, Monash Centre for Astrophysics** [205]  
New Measurements of the Evolving Growth Rates of Galaxies
- Georgios Bekiaris, Swinburne University of Technology** [206]  
Investigating Kinematic Modelling of Disk Galaxies Using GPUs
- Sarah Bird, Tuorla Observatory, University of Turku** [207]  
Testing a Velocity Dispersion Model of the Milky Way Halo's Stars
- Tui Britton, Macquarie University** [208]  
Māori Astronomical Traditions of Meteors
- Michael Brown, Monash University** [209]  
Galaxy spectral energy distributions from the ultraviolet to the mid-infrared
- Sarah Bruzese, ICRAR/UWA** [210]  
Is the initial mass function universal? The case of NGC 2915
- Pierluigi Cerulo, Swinburne University of Technology** [211]  
Morphological Transformation of Red Sequence Galaxies in High Redshift Galaxy Clusters
- Kate Chow, CSIRO** [212]  
The Australia Telescope Large Area Survey: The composite properties of young AGN
- Jordan Collier, University of Western Sydney** [213]  
Wide-Field Infrared Survey Explorer Observations of Infrared Faint Radio Sources
- Camila Correa, University of Melbourne** [214]  
Mass assembly history of main sequence galaxy halos
- Valentina D'Orazi, Macquarie University** [215]  
Lithium abundances in the globular cluster NGC 6218 (M12)
- Ashkbiz Danehkar, Macquarie University** [216]  
Evolution of planetary nebulae with hydrogen-deficient central stars
- Dimitri Douchin, Macquarie University / Universite Montpellier 2** [217]  
Estimating the fraction of binary central stars of planetary nebulae using the IR-excess method
- Mark Durre, Swinburne University of Technology** [218]  
NGC2110 – Young Star Clusters in the Circumnuclear Torus
- Tobias Feger, Macquarie University** [219]  
A stable wavelength comb for precise radial velocity measurements

- Michael Fitzgerald, Macquarie University** [220]  
A Review of High School Astronomy Student Research Projects over the last two decades
- Bi-Qing For, ICRAR/UWA** [221]  
The twisted Magellanic Stream and its Leading Arm(s)
- Caroline Foster, Australian Astronomical Observatory** [222]  
Outer triaxiality of a 'Fast Rotator'
- Gregory Goldstein, University of Western Sydney** [223]  
A Catalogue of Radio AGN behind the LMC
- Michael Goodwin, Australian Astronomical Observatory** [224]  
Starbugs enabling technologies and applications
- Elise Hampton, RSAA, ANU** [225]  
The search for TeV particle accelerators in the star forming HII complex G5.89-0.39 using Chandra
- Paul Hancock, University of Sydney** [226]  
Radio Faint Gamma-Ray Burst Afterglows
- Alex Hill, CSIRO Astronomy & Space Science** [227]  
Magnetic fields in the Smith Cloud
- Louise Howes, Australian National University** [228]  
Discovery of the oldest stars in the Galactic bulge
- Richard Hunstead, Sydney Institute for Astronomy** [229]  
How accurate is SuperCOSMOS astrometry?
- Minh Huynh, University of Western Australia** [230]  
The ATLAS 5.5 GHz survey of the extended Chandra Deep Field South: catalogue, source counts and spectral indices
- James Jackson, Boston University** [231]  
Galactic Structure from the MALT 90 Survey: High-Mass Star-Formation in Distant Spiral Arms
- Andrew Jacob, Sydney Observatory** [232]  
The Fall and Rise of Sydney Observatory
- Andrew Jacob, Sydney Observatory** [233]  
Making visible the women who measured stars in Australia
- Akila Jeeson-Daniel, University of Melbourne** [234]  
Clumping factors of H and He from EoR simulations
- Christopher Jordan, University of Tasmania** [235]  
First results for MALT-45: A 7mm survey of the southern Galaxy
- Sreeja Kartha, Swinburne University** [236]  
Wide-field imaging studies of globular cluster systems in three intermediate mass early-type galaxies
- Champlain Kenyi, University of NSW, Sydney** [237]  
Spectroscopic Fitting of the Terrestrial Atmosphere for Improved Planetary Atmosphere Observations and Greenhouse Gas Monitoring
- Dane Kleiner, Monash University** [238]  
A test for galaxy pre-processing using large-scale structure in the local Universe

- Rebecca Lange**, *ICRAR, UWA* [239]  
GAMA: The local mass-size relationship revisited
- Paul Lasky**, *University of Melbourne* [240]  
Magnetic Fields in Relativistic Neutron Stars
- Sarah Leslie**, *Research School of Astronomy and Astrophysics* [241]  
The Energy Source and Dynamics of Infrared Luminous Galaxy ESO148-IG02
- Karen Lewis**, *Tokyo Institute of Technology* [242]  
Decoding the Message from Silicon in Stardust Mainstream Silicon Carbide Grains
- John Lopez**, *UNSW School of Physics* [243]  
Molecular Gas Dynamics near Sagittarius A\*
- Vicki Lowe**, *University of New South Wales, CSIRO Astronomy and Space Science* [244]  
Variations between star formation environments
- Stephen Marsden**, *USQ* [245]  
Bcool Australia
- Nigel Maxted**, *The University of Adelaide* [246]  
Dense gas towards the supernova remnants RX J1713.7-3946 and W28
- Bernard Meade**, *Swinburne University of Technology* [247]  
Do tiled display walls improve feature recognition in large astronomical images?
- ABSTRACT WITHDRAWN** [248]
- Scott Meyer**, *ICRAR* [249]  
HI stacking can be used to measure edge-on rotation velocities for use in the Tully-Fisher relation
- Guido Moyano Loyola**, *Swinburne University of Technology* [250]  
Stars on the run: escaping from stellar clusters
- Themiy Nanayakkara**, *CAS* [251]  
Colour bimodality of galaxies at high redshift
- Belinda Nicholson**, *University of Melbourne* [252]  
Is The Fundamental Plane Fundamental?
- Robert Nilsson**, *Monash University and Lulea University of Technology, Sweden* [253]  
Properties of coronal rains in the Sun
- Samuel Oronsaye**, *ICRAR/Curtin University* [254]  
Pulsar Studies with the Murchison Widefield Array (MWA)
- David Palamara**, *MoCA (Monash Centre for Astrophysics)* [255]  
The clustering of GAMA galaxies: dependence on color, luminosity, mass and redshift
- Nicola Pastorello**, *Swinburne University* [256]  
Globular Cluster and Stellar Metallicity Radial Profiles in Early-Type Galaxies
- Samantha Penny**, *Monash University, MoCA* [257]  
The GAMA void galaxy sample
- Kevin Pimbblet**, *Monash University* [258]  
The role of stellar mass and environment for cluster blue fraction, AGN, and star formation

- Chris Power**, *University of Western Australia* [259]  
The Halo Mass Function & Future Galaxy Surveys
- Andrew Prentice**, *Monash University* [260]  
Mercury, Titan and Ganymede: new theoretical models for bulk chemical composition, internal physical structure and origin which match the latest spacecraft data
- Hayden Rampadarath**, *ICRAR, Curtin University* [261]  
Multi-Epoch Very Long Baseline Interferometric Observations of the Nuclear Starburst Region of NGC~253: Improved modeling of the supernova and star-formation rates
- Glen Rees**, *Macquarie University* [262]  
The radio properties of mass selected IR Galaxies out to  $Z=3$
- Stuart Ryder**, *Australian Astronomical Observatory* [263]  
The First Supernova Discovered with GeMS/GSAOI
- Graeme Salter**, *UNSW* [264]  
Direct Imaging of Long Period Radial Velocity Exoplanet Systems with NICI
- Giulia Savorgnan**, *Swinburne University of Technology* [265]  
The supermassive black hole mass - Sérsic index (and other) relation(s) for bulges and elliptical galaxies
- Richard Scalzo**, *Australian National University* [266]  
Type Ia Supernova Bolometric Light Curves and Ejected Mass Estimates from the Nearby Supernova Factory
- Stas Shabala**, *University of Tasmania* [267]  
The relationship between lobe luminosity and kinetic power of AGN jets
- Genevieve Shattow**, *Swinburne* [268]  
Measuring the environments of proto-clusters in the high redshift universe
- Luke Shingles**, *Australian National University* [269]  
The Chemical Evolution of Heavy Elements in Globular Clusters
- Izabela Spaleniak**, *Macquarie University* [270]  
Integrated photonic lanterns with gratings: miniature spectral filters for near-infrared spectroscopy
- Elodie Thilliez**, *Swinburne University of Technology* [271]  
A DEBRIS disk around the planet hosting M-star GJ 581 spatially resolved with Herschel
- Georgios Vernardos**, *Swinburne University of Technology* [272]  
Adventures in the microlensing cloud: eResearch tools for zooming into the heart of quasars
- Andrew Walsh**, *Curtin University* [273]  
High spatial resolution observations of water masers in HOPS
- Kathrin Wolfinger**, *Swinburne* [274]  
Exploring the Ursa Major region
- Graeme Wong**, *University of Western Sydney* [275]  
The physical conditions of the Lupus molecular clouds
- Tim Young**, *University of New South Wales* [276]  
Giants in Vela: The high energy tail of Vela's pulsed radio emission
- Christian Wolf**, *ANU* [277]  
Photometric Redshifts: Template-based vs. Empirical
